

The *WikiTopia Archives* program launched in March 2018 by the association *ArkéoTopia®*, an *alternative approach to archaeology*, aims **to encourage the digitization of archival documents belonging to private individuals** in order to ensure their **free and public distribution as well as the study** of these documents via *Open source* tools.

The WikiTopia Archives program

WikiTopia Archives is a program for digitization of archaeological sources run by the association *ArkéoTopia®*, an *alternative approach to archaeology*. Launched in March 2018, with a first corpus of letters from the 19th century, the program is aimed at individuals interested in archaeology and at archaeologists, both students and researchers. Its objective is to encourage them to digitize and then publish their historical sources on Wikimedia via the *Open Source* tools. In this way, **the various documents will be accessible to the greatest number of people all over the world and research on them will be encouraged**.

Back to the genesis of the program

In 2015, David Commarmond, archaeology lover and member of the *ArkéoTopia* association, found a batch of six letters written between 1838 and 1850 by the hand of Ambroise Comarmond (1786-1857). He was an important member of Lyon's society, doctor, and then curator of the Museum of Fine Arts of Lyon, and had an epistolary relationship with Anatole de Barthélémy (1820-1904), archaeologist and high official, close to Prosper Mérimée (1803-1870). These six letters are part of a larger corpus of 200 letters which groups together several correspondences between Anatole de Barthélémy and his contemporaries. **Considerations on daily socio-economic life but also exchanges on the role of archaeology, then an emerging discipline, are slowly built up through these lines**. Interest in these sources led us, as an association of archaeology, to mobilize some of our members in order to acquire these letters on the understanding that they would be subject to digitization and public distribution.

Once the letters were in our possession, we wanted to make them accessible for scientific and heritage purposes. Already involved in the Wikimedia galaxy for the improvement of articles in the *Wikipedia* encyclopaedia or on the organization of the *Wiki Loves Monuments* competition, we chose to digitize them on *Wikimedia Commons*, then to transcribe them on *Wikisource* in order to publish them on the web for free access. In 2020, we digitized 10% of the corpus.

Why Wikimedia ?

We chose Wikimedia for its free license, the solidity and internationalization of data as well as its strong community. For us, it was important that these documents, once put online, could be accessible from everywhere and by everyone. In this way, we also highlight how digitization can open data to scientific research without despoiling the owners of the sources. Our initiative is in line with other works carried out by the scientific community such as the programs of the National Museum of Natural History of Paris for [Contributing to the improvement of knowledge on biodiversity](#) or the [program Bulliot, Bibracte and me](#), for the transcription and documentation of the archives of excavations carried out by Archéorient on the celtic site of Bibracte-Mont Beuvray.

And after ?

With this first experience, **we hope to encourage private individuals to enhance their personal collections, archaeology students to contribute to the work of referencing, and researchers to take note of the information on display and to study them.** The goal is to complete the current project on Anatole de Barthélemy's archives and to initiate others, all archaeological periods combined.

The digital workspaces of the program

- ▶ Access to the discussion area with contributors is via the "[Projet:WikiTopia party](#)" entry on Wikipedia.
- ▶ The digital archives are accessible from the Commons [Category:Media contributed by ArkéoTopia](#) and their transcription is available on the WikiSource website at the entries [WikiSource website at the entries correspondences of Anatole de Barthélemy and Ambroise Comarmond](#).
